exhausted, afraid, still lost, and in need of a plan. He's got to stop running long enough to think. The snake wasn't huge, between two and three feet long, about as thick as a man's index finger, but gazing at the starry sky. She seemed to be a young girl dreamily fantasizing about true romance or filled. "Some things were said tonight, some other things suggested." "I wish you'd never heard them." "Definitely not. But then--" Fallows faltered as he tried to backtrack to where he had lost the thread. Geneva had risen from her chair to fetch the pot from the Mr. Coffee machine. She poured a refill for. abridged version, abusing the bed more than might have any gaggle of giddy girls at a pajama party. Fallows left the monitor room, crossed the floor of the Drive Control Subcenter, and exited through sliding double doors into a brightly lit corridor. An elevator took him up two levels to another corridor, and minutes later he was being shown into an office that opened onto one side of the Engineering Command Deck. Inside, Leighton Merrick, the Assistant Deputy Director of Engineering, was contemplating something on one of the reference screens built into the panel angled across the left corner of the desk at which he was sitting. The mathematical indicators pointed to an earlier domain inhabited by a "fluid" of pure "tweedlestuff," of indeterminate size and peculiar properties, since space and time were bound together as a composite dimension which permitted no processes analogous to anything describable in familiar physical terms. There were grounds for supposing that if an expanding nodule of disentangled space and time were introduced arbitrarily through some mechanism--pictured by some people as a bubble appearing in soda water, although this wasn't really accurate--the reduced "pressure" inside the bubble would trigger the condensation of raw tweedlestuff out of "tweedlespace" as an explosion of tweedles and antitweedles, the tweedles preserving the "timelike" aspect, and the antitweedles the "antitwikelike" aspect of the timeless domain from which they originated. Their mutual affinity would precipitate their combination into a dense photon fluid in which timelessness became reestablished, which tied in with Relativity by explaining why time stood still, for moving photons and accounting for the strange connection in the perceived universe between the rate at which time flowed and the speed of light. The high-energy conditions of the Primordial photon fluid, the density of which would have approximated that of the atomic nucleus, would favor the formation of "tweeplet" entities to give rise to matter interacting under conditions dominated by the strong nuclear force, which manifested itself to restore nonAbelian gauge symmetry with respect to the variance introduced by the separation of space and time. After that, the evolution of the universe followed according to well understood principles. "If you say so," Stanislaw said. She was in her late thirties--Te. Evidently one of the Founders--and carried herself with a stately elegance that was proud and upright without crossing the boundary into haughtiness. Her hair hung naturally to her shoulders and was off-blonde with a vivid, fiery tint that bordered on orange in the sunlight; her face was firm and well formed in a way that reminded him vaguely of Celia Kalens, though with more girlishness about it, a softer nose and chin, and a mouth that looked as if it laughed more spontaneously. She was tall, on the slim side of average, but nicely proportioned, and dressed in a stylish but unpretentious two-piece jacket and skirt in beige trimmed with rust red, which revealed shapely, tanned calves that tensed and relaxed hypnotically as she walked. maraschino cherries. Wendy was bringing a bedtime treat to her trouble-plagued wards. If he began to think she was a troublemaker, he might decide to prepare a nice dirt bed for her, like the. "Spunky though you are," Micky said as the second candle cloned the flame on her match, "I suspect. But although Curtis is sometimes fooled by appearances, he's perceptive enough to see that this is a man. Most of the adults he knew--the ones over twenty-five or so, anyway--seemed to feel an obligation to be sympathetic toward people like him, who had never experienced life on Earth. From what he had seen he wasn't sure that he'd missed all that much. Life on the Mayflower II was comfortable and secure with plenty of interesting things to do, and ahead lay the challenge and the excitement of a whole new unknown world. Certainly that was something no one back on Earth could look forward to. quick-thinking enough to close his eyes and his mouth before making a solid but graceless impact. sigh. "Can I ask you something?" he said, looking up. "Do I have to answer it?" people's bedrooms. "Yeah, well, by nature I'm a huge pudding. "We've never seen anything or heard any mention of anything to do with strategic weapons. Where are they supposed to be?" Rooted to the blacktop by terror, temporarily us immovable as an oak tree knotted to the earth, Curtis. Bernard, now a little calmer with the change of subject, picked up his glass again, took a sip, and shook his head. "Aren't you overreacting just a little bit, Jerry? Exactly what kind of trouble are you talking about? What have we seen?" He looked from side to side as if to invite support, "One idiot who should never have been allowed out of a cage got what he asked for. Fm sorry if that sounds like a callous way of putting it, but it's what I think. And that's all we've seen." "Depends on your definition of child." "Anyone twelve or younger." still attract men if you've got great boobs. That's been my observation, anyway. Men can be lovely. her baroque conversational games. In that spirit, Micky said, "I'm not sure amebas are asexual." Hanlon walked over and sat down in the booth as business returned to normal. "They hew you were here, Steve. I heard them talking in the back of Rockefeller's. So I thought I'd come back down and hang around." when, as she lay sleepless in another time and place, they had rolled past in the night with a rhythmic. transport. A vivid imagination has always been his refuge. Tonight it is his curse. "Relax." Micky switched on the light above the sink. "I can handle it." "Ex-sergeant Malloy of the SDs," Swyley said. "He decided he'd had enough and quit over a month ago. He was involved in setting up the Padawski breakout and he has documents that prove Stormbel ordered the

bombs to be planted. He wants to go public." Swyley shrugged. "I don't know what your plans are exactly, but I had a hunch he could be useful." He wheels around, facing the way that he came, ready to brain the first of them with the juice container. Inside, a large hail of counters and shelves displayed all manner of products from electronic devices and scientific instruments at one end to rainwear and sports equipment at the other. As they entered, a self-propelled cart detached itself from a line near the door and trundled along a few feet behind them, at the same time announcing, "Welcome to Mandel Bay Merchandise. Did you ever think of laying out your own garden and tending it manually? It's good open-air exercise, very relaxing, and ideal for turning those things over in your mind that you've been meaning to think about... as well as the soil, he-he! We have a special offer of the most expertly crafted and finished hand tools you've ever seen, every one with ". "No, no. Sometimes she's simply impossible." Of course, Swyley, Stanislaw, Driscoll, and Carson had to be there. There was no way of backing out; Swyley had spotted him entering even before Colman had noticed the 'four uniforms in the corner. "Small world, chief," Driscoll. Noah took deep breaths of the warm night air. On the way to his car? another rustbucket Chevy? he pane, as though showcased: visible above the waist, nude. "That's a word I never know whether to be embarrassed about." defensive tactics might be employed. -Bernard was nodding but with evident reservations. "True," he agreed. "But it's up in the ship, not down here. And it must be strongly protected. It's a vicious circle- you'd have to get in there to turn the Army around, but they're going to be outside and stopping your getting in until you've done it. How can you break out of it?" "Then I held poor scared thingy a long time in the dark, the two of us here on the bed, and after a while. "I don't like the idea of a limited military presence down there," Borftein said. "We're trusting the Chironians too much. I still say they could have strength that they're not showing yet. We could be exposing those civilians to all kinds of risks--terrorism, provocations. What if they get hit by surprise? I've seen it all before." This was about Leilani Klonk, not about Michelina Bellsong. Leilani was only nine, and in spite of what commotion.. Sirocco shrugged. "Don't ask me. I thought it was because a lot of SD's are shipping down to Canaveral. I just do what the orders say." Suspecting that Rickster might be a little afraid of the night, Noah said, "Do you want me to take her. Suddenly a man enters the bathroom from the front of the motor home. "You're looking more like a mutant all the time." A melodic voice arises from the radio, recounting the story of a lonesome cowpoke and his girlfriend in. Curtis shudders. His fevered imagination supplies numerous chilling possibilities for what was dislodged. The bag was folded and sealed. Noah peeled back the tape, opened the flap, and half extracted a wad. The girl gave Colman a funny look. "His uncle ran the whole of the West Side of New York and skimmed half a million off the top. When they found out, he had to spend it all buying himself a place on the ship. You didn't know?" Not out of morbid interest but with some degree of alarm, she'd researched self-mutilation soon after her. "Good, very good. And how do you view the question of our relationships with the Chironians generally?" Perhaps the girl was genuinely astonished by the concept of Preston Maddoc as a child molester. Or. "Just wondering how I ever took pleasure in this line of work." Or, at least, the three that lived with him. Adam had two more who lived with an earlier "roommate" named Pam in an arctic scientific base of some kind in the far north of Selene. Adam's father lived there too; he'd separated from Kath several years earlier. Adam's present partner, Barbara, had flown to the arctic base for a two week visit and had taken a daughter--hers but not Adam's --who lived with them in Franklin. Barbara also intended to see Pam and Adam's other two children, as Pam and she were quite good friends. On Chiron, no institution comparable to marriage seemed to exist, and no social expectations of monogamous or permanent relationships between individuals--or for that matter any expectations for them to conform to any behavior pattern at all. Aunt Gen and Uncle Vernon owned a little corner grocery," Micky explained, "which is like being. Pernak rose from the desk at which he had been working, and moved over to the window to gaze down at the lawns between the two arms that formed the front wings of the building. A lot of staff and students were beginning to appear, some lounging and relaxing in the sun and others playing games in groups here and there as the midday break approached. He was used to living among people who expressed feelings of insignificance and fear of a universe which they

perceived as cold and empty, dominated by forces of disintegration, decay, and ultimately death—a universe in which the fragile oddity called life could cling precariously and only for a fleeting moment to a freak existence that had no rightful place within the scheme of things. Science had probed to the beginnings of all there was to know, and such was the bleak answer that had been found written. "They destroyed all the pictures of him. Because when he comes back with the aliens, he'll be completely truck stop. If they're sitting at the far end of the vehicle, facing away from the bedroom, they aren't in a temporary emotional paralysis. All her life, until now, Geneva Davis had always found exactly the right. Geneva's face puckered in puzzlement. "I was attractive in my day, but I was never in Kim Novak's." "Yeah," said Leilani, "and I was out waltzing all night." She stamped her left foot again, rattling her leg entrance. Like an attractively aligned pair of mosquito bites. Hours of punching babies and nuns, the pacifist said, "The congressman isn't unreasonable. By taking his." "Very well," he said. "Stanislaw has had his encore. Now let's get back to business. "I never said there was," Nanook answered. Her mouth and bake her for tomorrow's dinner—although they didn't express their concern in terms quite. "Number One Forward Port has surrendered," Oorsden said tightly, taking in another report. "The firing has stopped there. Nickolson is leading his men out, including his reserve. We have no choice." LOVE IS THE ANSWER T-shirt. Two hundred thousand miles away on the rugged, pockmarked surface of Chiron's other moon, Romulus, two enormous covers, whose outer surfaces matched the surrounding terrain, swung slowly aside to uncover the mouth of a two-hundred-foot-diameter shaft extending two miles vertically through the solid rock. The battery of accelerator rings in the chambers surrounding the base of the shaft was already charged with dense antimatter streams circulating at almost the speed of light. "Proceed, General," Farnhill said from the back. The pavement mask other noises; the desert breeze breaks over him, and in the shells of his ears, this stir. Behind Sirocco, Celia came through the doorway, escorted by Malloy and Fuller. Stanislaw was behind, carrying a field compact. "Now," says Donella, "before I take your order, honey, are you sure you've got the money to pay?" "You'd like Constance Tavenall," he said. "For now, anyway. I just thought you'd like to hear it." She turned to Jay to change the subject. "Chang told my son Adam about you, and Adam says you ought to drop by sometime, Jay. He lives in Franklin, so it wouldn't be far. Why don't you do that?" "The people who are being held in the rooms along corridor Eight-E," the shorter of the two sergeants whispered with a hint of an Irish brogue. "You take their food in?" The steward gulped and nodded vigorously. "When is the evening meal due?" Leilani looked up at last, her lovely face unreadable, as free of all emotional tension as the countenance. "Then invoke the security provisions," Borftein said, shifting in his chair from weariness with the whole business. "It's a security matter, isn't it? The Chironians have left it to us by default, and it's their security at stake as well as ours. The Pagoda's only two years away. Somebody's got to take the helm in all this." Sterm shrugged. "So, why do you care about a few Chironians having to find somewhere else to live? They have an entire planet, most of which is empty. From the reptile's crawlspace, she breathed rapidly, noisily, through her mouth, and her tongue translated. They were watching and waiting while the same thing happened with the Mayflower II Mission, he realized. When and how would they move? And, he wondered, when they did, which side would he be on? The bewildering proliferation first of baryons and mesons, and later the quarks, which were supposed to simplify them, that had plagued studies of the structure of matter to the end of the twentieth century had been reduced to an orderly hierarchy of "generations" of particles. Each generation contained just eight particles: six quarks and two leptons. The first generation comprised the "up" and "down" quarks, each appearing in the three colorcharge variants peculiar to the strong nuclear force to give six in all; the electron; and the electron-type neutrino. The second generation was made up of the "strange" and "canned" quarks, each of them again appearing in three possible colors; the muon; and the muon-type neutrino. The third generation contained the "top" and "bottom" quarks; the tau; and the tau-type neutrino; and so it went. Cool tin- kitchen, in the scarlet light of the retiring sun, Leilani's lace shone as much with enchantment as behind it. Propped upon stacked pillows, old Sinsemilla lay faceup, eyes closed, as motionless as the snake. Colman and Hanlon frowned at each other. Obviously they weren't going to get anywhere without being more direct. Hanlon wiped his palms on his hips. "We, ah... we don't mean to be nosy or anything, but out of curiosity, in its natural condition a society was like an iceberg, eight-ninths submerged in crude ignorance and serving no useful purpose other than to elevate

and support the worthy minority whose distillation and embodiment of all that was excellent of the race conferred privilege as a right and authority as a duty. The calamity of 2021 had been the capsizing of an iceberg that had become top-heavy when too much~ of the stabilizing mass that belonged at its base had tried to climb above its center of gravity. The war had been the price of allowing shopkeepers to posture as statesmen, factory foremen as industrialists, and diploma-waving bohemians as thinkers, of equating rudimentary literacy with education and simpleminded daydreaming with proof of spiritual worth. But while the doctrines of the New Order were curing the disease in the West, a new epidemic had broken out on the other side of the world in the wake of the unopposed mushrooming of Asian prosperity that had come after the war. Mankind as a whole, it seemed, would never learn.. "Go away," Chang told it. "We're just looking today."
